

Expand your horizons with Easiteach!

Engage, empower and enjoy!

Easiteach is an award-winning family of simple-to-use software from RM that can be used with any interactive whiteboard to deliver engaging and stimulating whole-class teaching right across the curriculum.

Easiteach lets you bring together the interactive experience; rich media; traditional teaching tools in digital form and your own teaching practice, making lessons more engaging and enjoyable for everyone!

It's easy

Intuitive to use and developed jointly with teachers and teaching experts, Easiteach keeps pace with your lessons. When you want a resource it's only a couple of clicks away.

The extensive toolkit includes many stock classroom materials: pull out a number line or a multiplication grid; grab literacy builder cards for words and sentences, switch on timers for experiments. The Easiteach toolbars ensure they're all at hand.

Creation is the key for Easiteach

- You can use the built in rich media library that includes text, clipart, animations, videos, flash files and sounds.
- Or you add to the built in resources with your own graphics, sounds, videos etc. and use Easiteach to bring them together.
- And you can use the Easiteach subject specific tools for Literacy, Maths, Science and Geography to make them into a truly interactive experience.
- Even the core Easiteach tools can enrich a lesson. For example, use the animation tool to quickly and easily animate on-screen objects, bringing concepts to life.

Advanced functions you'll use

The Easiteach speech engine can help reinforce language skills, speaking sounds, words or sentences as they are typed. It supports speech at different speeds, and various languages including French and Italian, as well as English. Handwriting recognition in Easiteach can encourage correct letter formation with both print and cursive writing, by turning the written word into text.
