INSIGHT SYSTEMS

InSight Systems is a preferred supplier for Audio Visual equipment at Swinburne University of Technology. They were recently engaged to supply and install the AV products and systems required for a large-scale project in our Hawthorn Campus.

The project was significant both in size and complexity involving the creation of digital teaching spaces over an entire floor designed for flexible, collaborative and individual learning.

Not only did InSight Systems provide the products and systems specified, they also demonstrated considerable expertise in helping us effectively overcome the challenges of our complex system design. Wayne Schultz and his team proved themselves more than capable in delivering an exceptional solution for the university.

The result is a high-tech revolutionary learning space, setting a new standard for the effective integration of Audio Visual equipment in educational facilities.
